

Delaware Community Solar

Community solar allows multiple customers to share the electricity output of a solar project. Customers enroll with a project, receive a percentage share of monthly energy generated, and get a credit applied directly to their Delmarva Power bill.

Key Facts

Any Delmarva Power customer can enroll - renters, homeowners, businesses, and nonprofits alike

No equipment or roof required - the solar project is built and maintained elsewhere.

Projects are sited on brownfields, landfills, farms, or large commercial rooftops within Delmarva Power's service territory.

Community solar is a cornerstone of the Delaware State Energy Plan, which prioritizes clean energy access in high energy-burdened communities.

Did You Know?

Most subscribers save 10-20% annually on their electricity bill. Exact savings depend on your project and contract terms.

Community solar feeds clean electricity into the shared grid, reducing reliance on fossil fuel sources and helps reduce strain on the grid.

You can subscribe with up to four projects, but combined subscriptions cannot exceed 110% of your annual electricity consumption.

What to Expect

You will still receive your Delmarva Power bill, now with your community solar credit.

The project will bill you separately for your subscription fee.

The subscription fee is lower than the credit. The difference is your monthly savings.

Your monthly credit varies based on actual generation - summer months typically produce more than winter months.

Want to Sign Up

Check the list of projects with a Final Certificate to Operate from the Public Service Commission

Contact projects from the list to determine if they are enrolling customers

Read contract terms carefully- subscription savings, cancellation terms, contract period and auto renewal terms will all be detailed in your contract.

You have a 3-day cancellation window after signing with no penalty. After that, your contract terms apply - read carefully.

Door-to-door marketer: Never share account information without verifying ID
